

INTRODUCING ATELIER

Your desktop AI workshop

Agentic chat and media creation.
Local models or cloud providers, in one app.

A closer look at what's inside

No subscription.
MIT open source.

Free to use.
Yours to explore and modify.

MIT

Bring your own models and API keys.
Cloud providers bill for usage separately.

Local models. Local tools.

Ollama

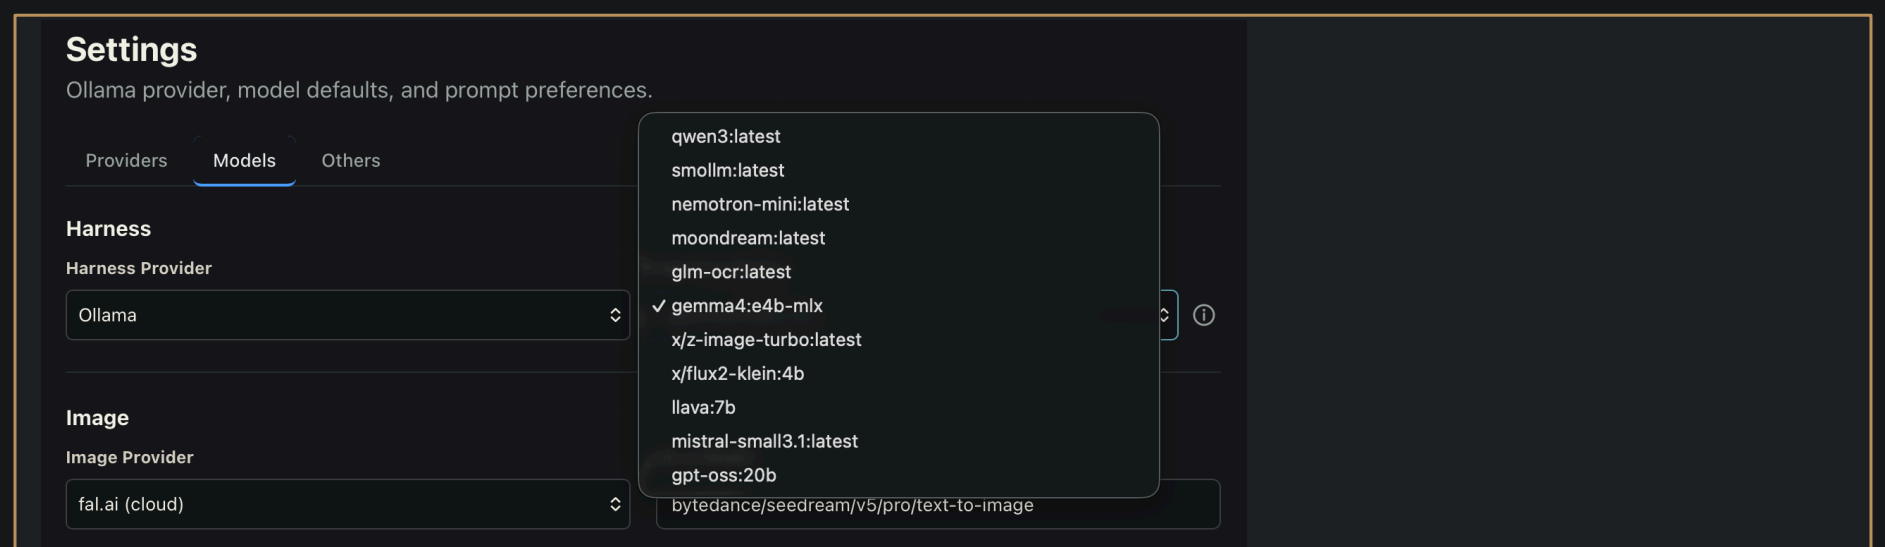

Local chat and image models

OpenAI-compatible APIs

Connect your local model server

ffmpeg / ImageMagick / Whisper

Video edits, image processing and transcription

Privacy. Your work stays local.

Keep sensitive data and research
on your own computer.

Local

Configure local models + local tools.
Your content stays on your system.

Cloud AI. Pay per use.

No Atelier subscription. Use your own API keys.

Or mix local inference with cloud inference

Run the harness model locally for reasoning,
privacy, control and everyday tasks.

Local harness $\rightleftharpoons$ Cloud tools

Image generation
Audio / voice generation
Video generation

Call capable cloud models only when needed.
Tool inputs go out. Results return to the harness.

Telemetry. Model costs, visible.

Detailed token counts and dollar usage show what each model costs per turn, per conversation.

Tokens + \$

Usage and cost details depend on what each provider supports.

Less AI slop.
More human craft.

Atelier now includes lightweight editors
for video, audio and images.

HITL

Human in the Loop.
Small edits. Your creative judgment.

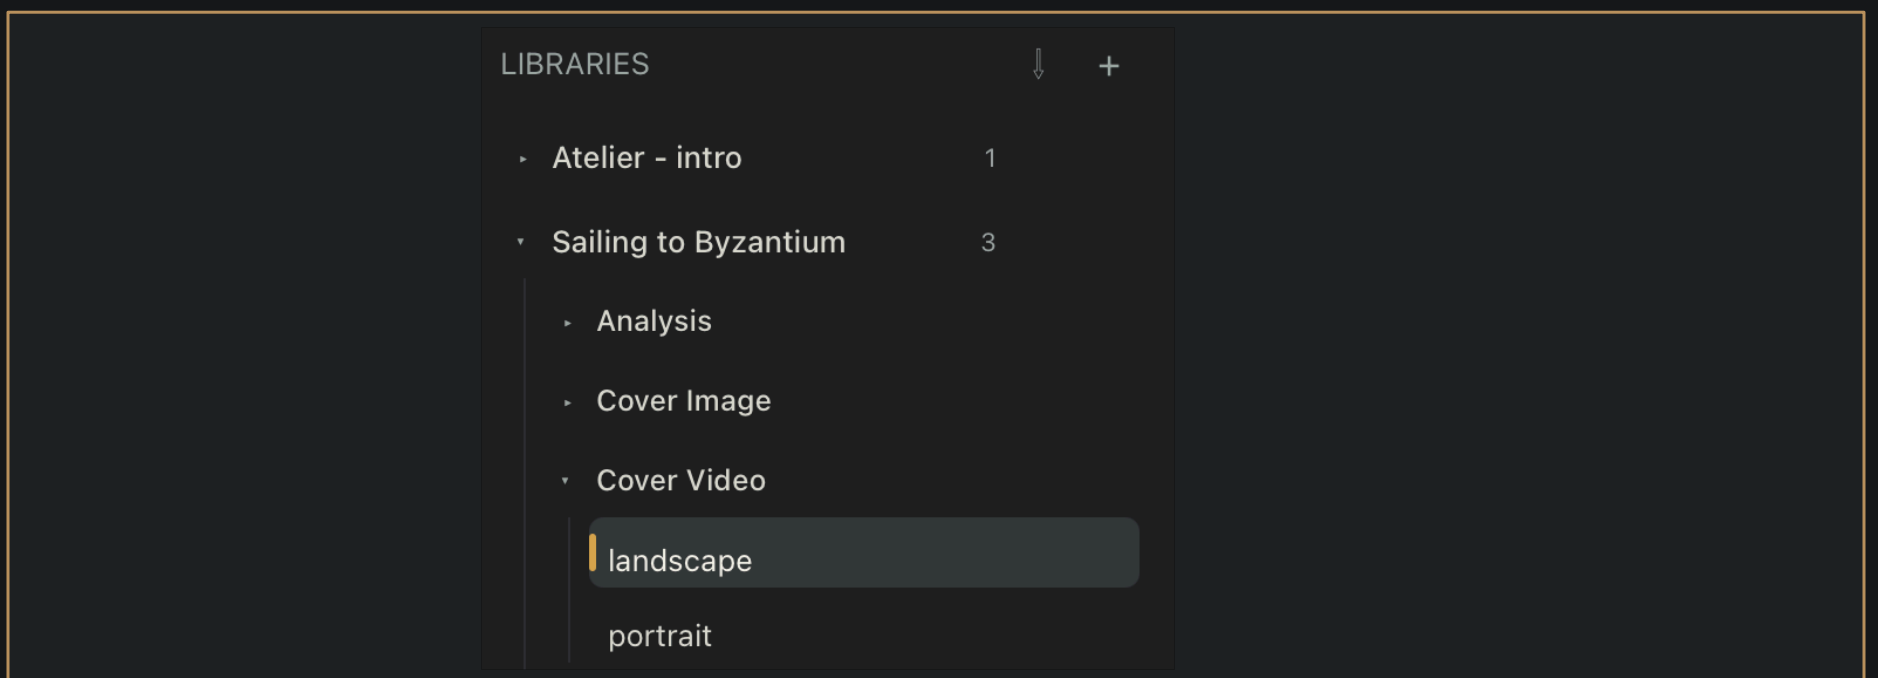

A home for every project

Organization inspired by Final Cut Pro.

Library

Projects

Conversations and creative work
